

Ground Bar Tolerances

Our steel bar can be centreless ground to your exact sizes and tolerances.

Precision ground steel bar is suited for applications which require a tighter tolerance than standard commercial bright drawn, bright turned or bright peeled bar. Precision ground steel bars can be supplied to a defined tight tolerance on diameter, providing good roundness, straightness and a fine surface finish. The roundness and straightness of a ground steel bar ensures its suitability for machining in environments which require minimum vibration as the bars rotate at high speeds. Precision ground steel bars are well suited for a wide range of applications such.

Below we list the standard ISO tolerances for precision ground, bright drawn, smooth turned and polished round steel bar (diameters).
