

Lumsden Ground Plate

Lumsden ground steel plate suppliers, delivering to the whole of the UK. West Yorkshire Steel supply ground steel plate in wide variety of steel specifications. Lumsden ground steel plate is suited for applications which require a tighter tolerance than commercial hot rolled or sawn plate. With Lumsden ground steel the grinding offers a defined tolerance on thickness with a quality surface finish.

[Flame cut profiles](#) in mild steel and carbon steel grades can be Lumsden ground to your specific sizes on thickness with a standard tolerance of +/-0.25mm. If a tighter tolerance is required please consult with our sales team as we may be able to offer a Lumsden ground tolerance of +/-0.10mm or a precision ground finish, dependent on the size of steel plate required. Plates can also be edge machined to close tolerances. Machining costs and delivery time can be reduced by simultaneously grinding multiple steel plates, this also ensures a uniform thickness on all pieces.

We welcome export enquiries for steel plate. Contact our sales office and consult our [shipping policy](#) for further details.

Details of your enquiry

When enquiring on precision ground steel plate grades please ensure you provide the following information to our sales team:-

- Size & quantity - details of the size of plate and the number of pieces required
- Tolerance - please detail the exact size and tolerance allowance.
- Steel specification - full details of the steel grade.

Certification

Ground steel plate is available with BS EN 10204 3.1 mill certificate, a cast and analysis certificate or certificate of conformity. Please request when placing any orders.

Quality Assured Supply

All ground steel plates are supplied in accordance with our ISO 9001:2015 registration. Contact West Yorkshire Steel with your enquiries for ground steel plate.
